Shiny packaging foam (*may have Resin code #2, #4*)

- Please no tape, paper, dirt and food waste

Polyurethane
foam

Shiny cloth and shiny,
non-brittle packaging
foam.

Foam insulation

Starch Peanuts
(*decomposes in water*)

Polystyrene Foam /Styrofoam®

- Expanded polystyrene foam (EPS) is polystyrene that has been expanded. Many people refer to it as Styrofoam® which is really just a commercial brand of insulation.
- It's often white but packing peanuts, meat trays and some cut vegetable bowls are black, green, blue or pink.
- PlanetCon will accept foam containers such as clamshells, plates, cups, bowls and egg cartons. Block foam and packaging foam is also accepted.
- Some foods, especially tomato-based ones leave a stain behind. This is fine as long as the items are relatively clean and dry.
- Expanded foam peanuts (Styrofoam peanuts) are accepted at PlanetCon but they must be bagged separately. Make sure these are securely tied so they don't fly away in the breeze.
